

Catalogue of the Medical Library 1935 --- 1939

FOREWORD

The request for a brief catalogue of up-to-date publications in the Medical Library first came from physicians at a Medical Society district meeting. The library committee favored the idea as an excellent means of increasing the use made of existing library facilities. It also met with the whole hearted approval of the Dean and Medical Faculty Council Executive as an important channel of post-graduate education.

In 1920 the College of Physicians and Surgeons of Manitoba donated their library to the University of Manitoba on condition that its facilities should remain open to all physicians in the province. Since that time the number of volumes in the library has increased five fold and the journals received annually, four fold. The library is maintained by the Faculty of Medicine, University of Manitoba, assisted by generous grants from the College of Physicians and Surgeons and the Winnipeg Medical Society. These grants together make up about one-fifth of the total running costs of the library.

Books and journals loaned to non-Winnipeg physicians although on the increase, still remain low. This is a matter of deep concern to the Library Committee, who are anxious to co-operate with all the members of the profession and particularly are they concerned with the interests of the doctors outside Winnipeg. The College of Physicians and Surgeons have given the Manitoba Medical Review a grant for the printing of this catalogue in the hope that it will stimulate greater use of the library. Except for a few of the text books marked by an asterisk, the other volumes may be borrowed for one to two weeks depending on the demand. Postage will be paid on books or journals mailed out and the borrower has to pay return postage only, so that all may share in the library benefit. It is hoped that only a few books will be asked for at once and that they will be returned promptly so that others may use them. A list of the library regulations follows:

1. The lending department includes journals other than the last issued number and books other than large reference systems of medicine and surgery and text books in daily use at the library.

2. Recent volumes may be retained seven days, those not so recent for two weeks. Arrangements may be made through the librarian for further retention of a book provided there are no waiting requests for it.

3. Failure to return inside the time limit and upon notification from the librarian will entail a fine of 10 cents per day and withdrawal of borrowing privileges until the book is returned and the fine paid.

4. Defacing or damaging of books and all losses will result in withdrawal of privileges until such damage or loss is made good.

LIBRARY COMMITTEE

Dr. A. T. Mathers, Dean (Ex-Officio),
Dr. G. S. Fahrni,
Dr. F. G. McGuinness,
Dr. J. S. McInnis, Representative from the C.P. & S. (Man.),
Dr. M. J. Ormerod,
Dr. L. G. Bell, Secretary,
Dr. Daniel Nicholson, Chairman.

Classified List of Medical Books and Journals

Acquired by

The Library, Faculty of Medicine, University of Manitoba

June, 1935, to December, 1939

ANAPHYLAXIS AND ALLERGY.

- Bray, G. W. Recent Advances in Allergy, 3rd. ed., 1937. pp. 517.
London, Churchill.
- Rowe, A. H. Clinical Allergy Due to Foods, Inhalents, Contractants, Fungi, Bacteria and
other causes Manifestations. Diagnosis and Treatment, 1937. pp. 813.
Phila., Lea.

ANATOMY, EMBRYOLOGY AND HISTOLOGY.

- *Arey, L. B. Developmental Anatomy. A Textbook and Laboratory Manual of Embryology,
3rd. ed., 1936. pp. 593.
Phila., Saunders.
- *Beesley, L. & Johnson, T. B. A Manual of Surgical Anatomy, 4th. ed., 1935. pp. 717.
London, Milford.
- Clark, W. E. The Hypothalamus: Morphological, Functional and Clinical and Surgical Aspects,
1938. pp. 211.
Edinburgh, Oliver and Boyd.
- *Cowdry, E. V. A Textbook of Histology, 1934. pp. 503.
Phila., Lea.
- *Cunningham's Textbook of Anatomy, 7th. ed., 1937. pp. 1506.
London, Milford.
- *Cunningham's Manual of Practical Anatomy, 9th. ed., 1935. 3 vols.
London, Milford.

A FORM OF ACUTE INFECTIVE DISEASE OF THE NERVOUS SYSTEM NEW TO MANITOBA

By

A. T. MATHERS, M.D.

Provincial Psychiatrist

Department of Health and Public Welfare

Influenza sweeping over the world twenty years ago thoroughly merited the designation "scourge." Arising somewhere in Europe or Asia, it raced across political boundaries destroying life, sapping morale and generally terrifying a world that had already had a surfeit of horror and woe. The actual mortality due to this disease was no doubt in excess of the war mortality.

Huge and all as this direct toll was, there were other troubles to follow. A veritable Pandora's box of evils in the form of acute and varied affections of the nervous system appeared in the wake of the pandemic. Whether the occurrence of these maladies after influenza was a matter of coincidence only, or whether there was a closer yet mysterious relationship, has been for long a matter of conjecture. Present day opinion inclines very definitely toward the latter view.

These multiform disturbances of the nervous system appear now to be due to virus rather than bacterial action, and their occurrence has done more than all else to stimulate research in the field of viruses generally. Already considerable progress in investigation has been made, but little of it has been of practical value in that we still know little regarding means of propagation or therapeutic attack.

The primary wave in this flood of startlingly "new" diseases was, of course, made up of Epidemic or Lethargic Encephalitis. While the almost simultaneous occurrence of large numbers of cases implied a common causative agent, the protean character of the clinical manifestations suggested a great number of variables either in infecting agent or host resistance. But Epidemic Encephalitis gradually faded out, and it is unlikely that it now occurs.

However, either the human nervous system has become extraordinarily vulnerable, or new viruses and new sub varieties are appearing, for ever since that first epidemic of encephalitis, new disturbances of the nervous system have been noted. The Japanese and St. Louis epidemics of encephalitis reached large proportions but in clinical features, mortality and sequelae, each differed from the other and both form the original encephalitis. In Southeastern Saskatchewan last year a form of encephalitis appeared and slowly moved eastward until with the onset of cold weather, no new cases appeared. This took the form of an acute illness with stupor, and in many cases, temperatures ranging up to 106, or even higher. Deaths were few and apparently no sequelae developed. These were fairly distinctive entities. In addition there have been clinical states occurring and reported in which distinctive features were lacking—conditions so vague and indeterminate that frequently they were thrown forthwith into that diagnostic catch-all "Flu."

In September this year, there occurred at Selkirk Mental Hospital seven cases of a fairly well defined syndrome. Five of the patients were nurses, one an attendant, and one a patient. It is quite possible that there were more cases among patients, but mental patients are not always communicative regarding physical ills, and, since overt objective evidences were largely lacking, cases may have been missed.

The outstanding symptoms in these cases were parasthesias in the limbs accompanied by pain of a peculiarly irritating character. Muscular weakness was noted also. The onset was relatively sudden and seemingly afebrile. One such case would probably have been labelled Neuritis but the development of a group of cases during a limited period prompted a little closer appraisal. This disclosed other evidences that pointed to some central involvement as well as the evident disturbance of peripheral nerves. There was an unusual degree of lassitude, at times photophobia, and in one case a definite nystagmus. The cerebro spinal fluid examinations were negative. Five of the cases required bed care, two continued at their usual activities, but with languor and discomfort.

Recovery of a feeling of well being has been slow—the lethargy far outlasting the more obtrusive pain and parasthesia.

There is no doubt that this was a minor epidemic of some form of infection of the nervous system, both central and peripheral divisions being involved, hence the name "Neuronitis." It is unlikely that these cases were the only ones to occur in this area. In fact, a few others came to the author's attention and this report is published in the hope that others who may have seen such cases will report them.

Treatment was, of necessity, empirical. The only chemical medication that appeared to have any value as symptomatic relief was sodium salicylate in large doses, e.g., 20 grains properly balanced with alkaline salts such as potassium bicarbonate. It was thought that large doses of antineuritic vitamin might be helpful in limiting the duration of the acute symptoms and the subsequent lethargy. Parke-Davis and Company kindly supplied sufficient concentrated Vitamin B, for the purpose of testing this hypothesis. The number of cases was too small to allow of the formulation of definite conclusions, but the impression left was favorable.

The origin, means of transmission, life characteristics and ultimate fate of the viruses responsible for these and other cases of various types, are matters of which we are in ignorance. It is well to remember, however, that there now is definite knowledge that in some at least of these mysterious affections, other animals than man are victims. Horses, birds, and even mice, have been found to be implicated, and in the case of the eastern type of equine encephalomyelitis, mosquitoes seem to be a vector, although possibly not the only, or even the chief one.

COMMUNICABLE DISEASES REPORTED

Urban and Rural - October 8 to November 4, 1939

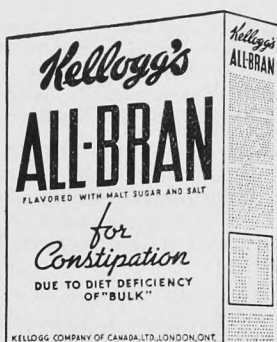

Whooping Cough: Total 140—Winnipeg 74, Unorganized 43, Grandview Rural 5, Brandon 3, Flin Flon 3, Kildonan East 1, Kildonan West 1, Minnedosa 1, St. Andrews 1, Transcona 1, Woodlands 1 (Late Reported: Roblin Rural 3, Flin Flon 2, Brandon 1).

Chickenpox: Total 127—Winnipeg 68, Kildonan East 20, Brandon 10, St. Clements 8, Lac du Bonnet 6, Pipestone 3, Unorganized 3, St. Boniface 2, Flin Flon 1, Hanover 1, Lansdowne 1, Norfolk North 1, Shoal Lake Rural 1 (Late Reported: Flin Flon 1, Kildonan East 1).

Scarlet Fever: Total 109—Winnipeg 47, Strathcona 10, St. James 8, St. Boniface 5, Brandon 4, Killarney 4, Oakland 3, Kildonan East 3, St. Vital 3, Brokenhead 2, Transcona 2, Turtle Mountain 2, Tuxedo 2, Clanwilliam 1, Dauphin Town 1, Lansdowne 1, Portage la Prairie City 1, Rosedale 1, Ste. Rose Rural 1, Strathclair 1, Swan River Town 1, Tache 1, The Pas 1 (Late Reported: St. Clements 3, Roblin Rural 1).

In addition
to laxative bulk
Kellogg's
ALL-BRAN
contains
Vitamin B₁
said by
many authorities
to help
intestinal
tone.

Made by Kellogg's
in London, Canada.

Tuberculosis: Total 97—Unorganized 18, Winnipeg 15, Dauphin Rural 6, Dauphin Town 5, Ellice 4, Ethelbert 3, Hanover 3, Mossey River 3, Rossburn Rural 3, Clanwilliam 2, Kildonan East 2, Russell Town 2, St. Vital 2, Silver Creek 2, Bifrost 1, Birtle Town 1, Brandon 1, Cameron 1, Cypress North 1, De Salaberry 1, Flin Flon 1, Fort Garry 1, Hamiota Village 1, Lac du Bonnet 1, Lawrence 1, Minitonas 1, McCreary 1, Norfolk North 1, Pembina 1, Russell Rural 1, St. Boniface 1, St. Clements 1, Ste. Rose Rural 1, St. Paul West 1, Shoal Lake Rural 1, Stanley 1, Strathcona 1, Swan River Rural 1, Transcona 1, Woodlands 1 (Late Reported: Unorganized 1).

Measles: Total 46—The Pas 17, Norfolk North 11, Unorganized 10, Winnipeg 4, Fort Garry 1, Kildonan East 1, Lac du Bonnet 1, Whitemouth 1.

Trachoma: Total 39—Morris Rural 24, Rhineland 8, Hanover 5 (Late Reported: Ste. Anne 2).

Diphtheria: Total 22—Winnipeg 15, Hanover 2, Tache 2, Brandon 1 (Late Reported: Kildonan West 1, Hanover 1).

Mumps: Total 18—Winnipeg 12, Brandon 1, Portage la Prairie City 1, Strathclair 1 (Late Reported: St. Vital 2, Edward 1).

Typhoid Fever: Total 15—St. Clements 4, De Salaberry 1, Lac du Bonnet 1, Rhineland 1, Tache 1, Unorganized 1 (Late Reported: Hanover 2, Portage Rural 1, Tache 1, De Salaberry 1, Rhineland 1).

Erysipelas: Total 11—Winnipeg 6, Montcalm 2, St. Boniface 2, Kildonan West 1.

Lobar Pneumonia: Total 7—Hanover 2, Brandon 1, St. Vital 1 (Late Reported: Lac du Bonnet 1, St. Boniface 1, Unorganized 1).

Diphtheria Carriers: Total 4—Winnipeg 4.

Anterior Poliomyelitis: Total 3—Lawrence 2 (Late Reported: Winnipeg 1).

Influenza: Total 3—Winnipeg 2 (Late Reported: Bifrost 1).

Puerperal Fever: Total 1—(Late Reported: Clanwilliam 1).

Amoebic Dysentery: Total 1—(Late Reported: Elton 1).

Venereal Disease: Total 127—Gonorrhoea 92, Syphilis 35 (for month of October).

DEATHS FROM ALL CAUSES IN MANITOBA

For the Month of September, 1939

URBAN—Cancer 53, Tuberculosis 6, Pneumonia (other forms) 3, Pneumonia (Lobar) 2, Dysentery 2, Syphilis 1, all others under one year 13, all other causes 130, Stillbirths 2. Total 212.

RURAL—Cancer 31, Tuberculosis 16, Pneumonia (other forms) 6, Pneumonia (Lobar) 5, Whooping Cough 4, Influenza 2, Dysentery 2, Syphilis 1, Typhoid Fever 1, all others under one year 37, all other causes 145, Stillbirths 6. Total 256.

INDIAN—Tuberculosis 4, Influenza 2, Pneumonia (other forms) 2, Pneumonia (Lobar) 1, all others under one year 7, all other causes 2, Stillbirths 2. Total 20.

OBITUARY

DR. FRANKLIN FLETCHER DUNHAM

Dr. Franklin Fletcher Dunham, Major C.A.M.C., M.C. with bar, died on October 31st in Deer Lodge Military Hospital, Winnipeg, aged 52. Born in Kingston, Ontario, Dr. Dunham was educated at Portage la Prairie and Winnipeg where he graduated in Medicine from the University of Manitoba. He practiced at Govan, Saskatchewan, until the outbreak of the War, where he served with the 5th Canadian Field Ambulance. After the Armistice he practiced in Rocanville, Saskatchewan, and West Kildonan in Greater Winnipeg.
